Software Developer

Job Summary

We are seeking a skilled Software Developer with expertise in Python and Go to build and scale our SaaS platform that delivers IP enrichment and intelligence solutions to customers worldwide. The ideal candidate will thrive in an agile environment, contribute to system design and development, and ensure high-quality, secure, and reliable code delivery. This is a full-time remote role.

Key Responsibilities

- **Application Development**
  - Design, develop, and maintain services and APIs powering our IP enrichment and intelligence portal.
  - Write clean, efficient, and testable code in Python and Go.
  - Implement scalable and secure solutions to handle large volumes of IP intelligence data.
- **Agile Collaboration**
  - Participate actively in sprint planning, backlog grooming, and daily standups.
  - Work closely with product managers, designers, and other developers to deliver features aligned with business goals.
  - Contribute to iterative development cycles, continuously improving code quality and velocity.
- **System Reliability & Performance**
  - Optimize backend services for speed, scalability, and resilience.
  - Monitor performance, troubleshoot production issues, and deploy timely fixes.
  - Implement robust testing, CI/CD practices, and automation for reliable delivery.
- **Security & Compliance**
  - Ensure code adheres to best practices for data security and compliance.
  - Contribute to secure handling and storage of sensitive customer and network data.
  - Collaborate with security teams to meet regulatory and compliance requirements.
- **Continuous Improvement**
  - Engage in code reviews and knowledge sharing to improve team practices.
  - Stay current with developments in Python, Go, and cloud-native technologies.
  - Recommend new tools, frameworks, and approaches to enhance development productivity.

Key Qualifications

- Proven experience as a Software Developer, with a strong portfolio of work in Python and Go.
- Familiarity with SaaS architectures, microservices, and RESTful or GraphQL APIs.
- Experience working in an agile team environment using tools such as Jira, GitHub, or similar.
- Strong knowledge of cloud platforms (GCP) and containerization (Docker, Kubernetes).
- Comfort with relational and non-relational databases.
- Strong problem-solving skills with attention to detail and a collaborative mindset.

Success Criteria

- High-quality, scalable features delivered consistently in alignment with sprint goals.
- Reduced technical debt through clean code, robust testing, and thoughtful design decisions.
- Improved system performance, security, and reliability for customers.
- Strong collaboration across teams leading to faster delivery and higher customer satisfaction.
